Epilepsy and Autism...is there a connection???

Yes, research studies have shown that 33% of children who are diagnosed with #autism also have epilepsy.

- Children with autism are (a little) more likely to have epilepsy.
- Children with epilepsy are (a little) more likely to have autism.
- Seizures are the most common neurologic complication in ASD.
- Not all children with autism will develop seizures.
- Epilepsy associated with ASD does not change the evaluation or management of seizures.
- Autism awareness day is coming up on April 2nd!
